Minimal maintenance required

Project: Furnitureland South Showrooms
Location: High Point, NC
Size: 90,000+ square feet
Completed: June 16, 2009
Original Finish: Sealed Concrete
Process: Diamond Polished and Dyed

Furnitureland South was seeking a beautiful floor to showcase their furniture without incurring the costs of other expensive flooring options. Secondly, they needed low maintenance and durability due to the nature of their business. To date, we have polished more than 90,000 square feet in multiple buildings on the High Point campus.

Polished concrete is an excellent alternative to VCT, ceramic tile, epoxy, acid stain, integral color, etc. The benefits include:

Brighter facility - High gloss floors increase the reflectivity of light.

Long-term solution - Without topical coatings, there is nothing to peel, chip, or flake.

No curing time - When we leave, your space is ready for operations to resume.

Minimal maintenance - Just sweep and mop, strippers or waxes are never used.

Increased durability - Our densifier hardens and dustproofs the floor.

Green - An environmentally friendly process that counts towards LEED-NC points.

Safe - Wet or dry, it meets and exceeds OSHA standards.

A high gloss finish with no topical coatings
